

Workshop on Sensitive Topics: Pre & Post Test

1. Name one sensitive research topic. Name one characteristic that categorizes it as a sensitive research topic.
2. What are gatekeepers? What are protectors? How do you know the difference when you are in the field?
3. Give an example of an empathetic response to the statement: "At home, I feel scared all the time".
4. True or False? Research on sensitive subjects is traumatic for research participants.
5. Illegal activities are just that: illegal. Why might you *not* report on an illegal activity that you hear about from an informant?
